

**An Illustrated Walkthrough to
Turbo HTML Brander**

You add `%%tokens%%` in the pages you want your customers and/or affiliates to brand.

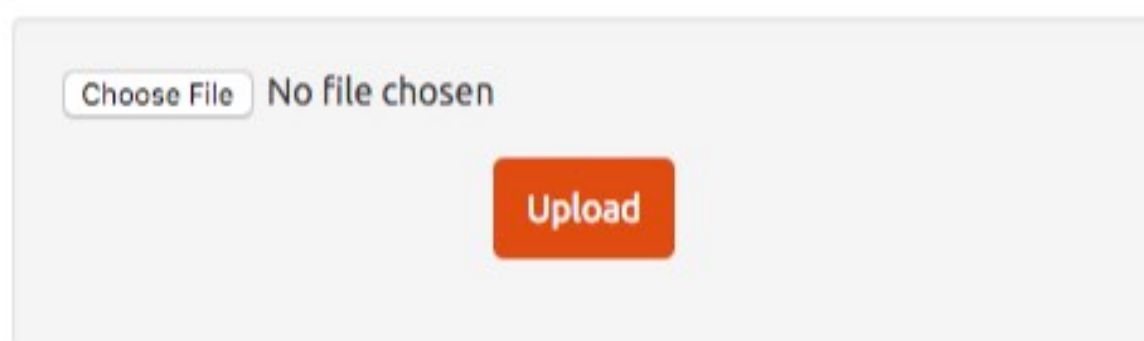

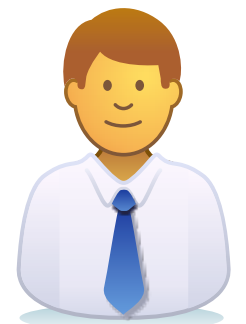

Next zip your full website.

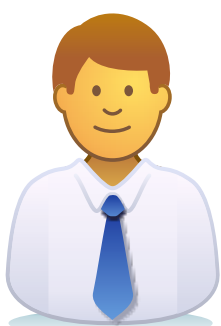

For example if this would be your website and you included `%%tokens%%` inside the `index.html` page, you'd have to compress in one `.zip` file ALL the folders and the `.index.html` file.

Turbo HTML Brander

Select the `.zip` that contains the page/s and all files, then click on the button to upload it.

Next you visit Turbo HTML Brander where you installed it on your server.

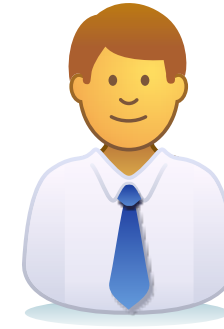

Once there you upload the zipped file of your website.

Turbo HTML Brander

Check the box under the "Discard" column if you do not want to use a token, otherwise insert a title and select a type (text in most of the cases; select 'textarea' for subscription forms, video code, etc). Once you're ready click on the button to generate the form or [click here](#) to return to the previous screen.

Tokens	Discard	Title	Type
%%video%%	<input type="checkbox"/>	<input type="text"/>	text
%%subscription_form%%	<input type="checkbox"/>	<input type="text"/>	text
%%name%%	<input type="checkbox"/>	<input type="text"/>	text
%%ID%%	<input type="checkbox"/>	<input type="text"/>	text
%%counter%%	<input type="checkbox"/>	<input type="text"/>	text
%%download%%	<input type="checkbox"/>	<input type="text"/>	text
%%domain_name%%	<input type="checkbox"/>	<input type="text"/>	text

Turbo HTML Brander automatically "scans" your page/s and discovers the %%tokens%% you used. Then it displays all tokens in a form so you can add meaningful titles.

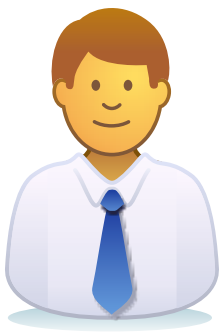

Once done you click on the button and...

Turbo HTML Brander

Your form has been generated! You can choose to download the form (if you would like to deliver it to customers and/or affiliates) or you can choose to fill in the form online (if you want to brand the website) or you can copy the URL of the form in the clipboard for future use (suggested).

Turbo HTML Brander creates a zip file that includes the generated form, also hosts the form, and you can also copy the URL of the form which you can then pass to people.

And here is what happens... You direct people to the hosted form

Insert the embed code of your video

Insert your subscription form

Insert your name

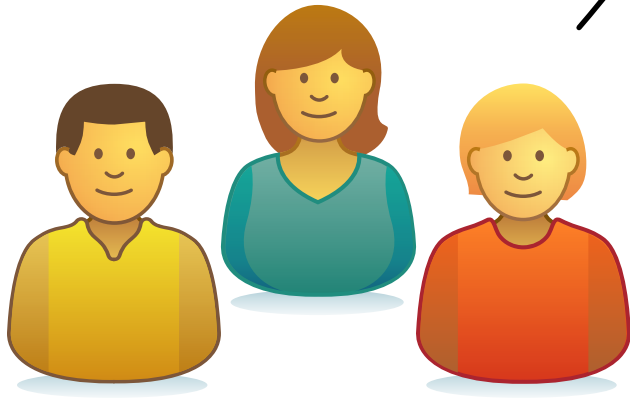

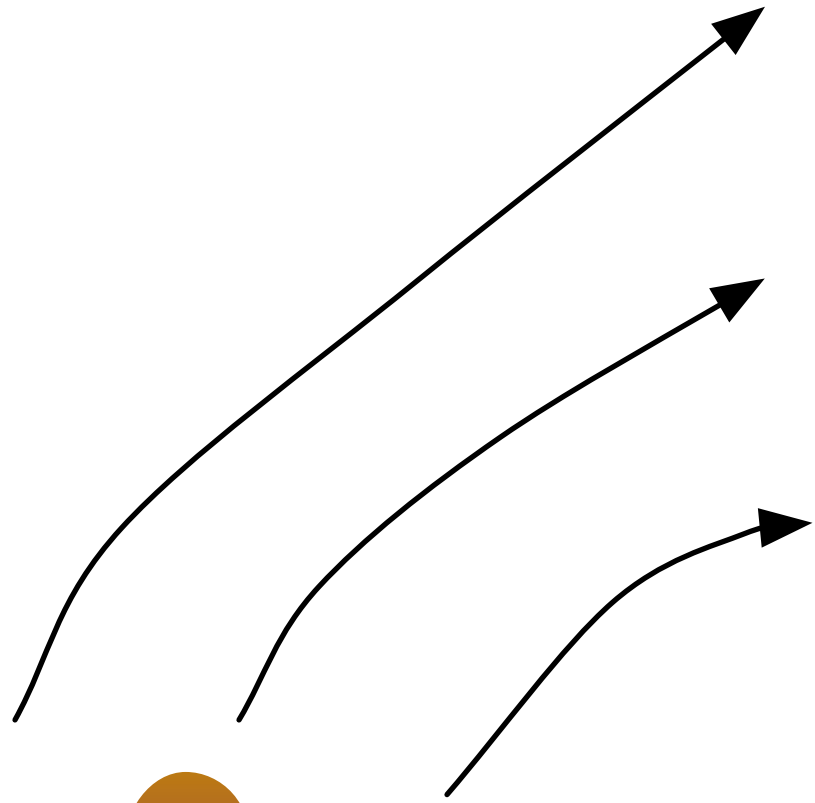

Insert your affiliate ID

Insert your counter

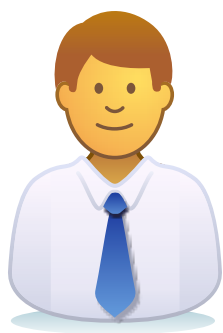

Insert the download link

Your domain name

Enter the text displayed below:

***People* (they could be customers that want to brand the website of a product you offer... or affiliates that want to brand a bonus page you created...) can then fill in the form and get a zip file with their **BRANDED** website!**

So for example, say you direct your affiliates to a form you created through Turbo HTML Brander for a Bonus website...

Insert the embed code of your video

Insert your subscription form

Insert your name

Insert your affiliate ID

Insert your counter

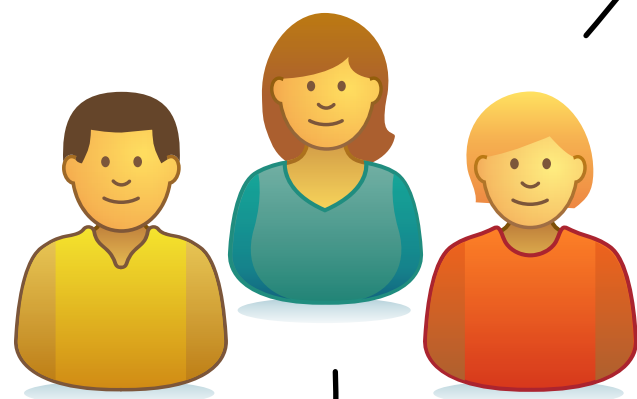

Insert the download link

Your domain name

Enter the text displayed below:

Back Next

And say you included tokens through which your affiliates could add their name, a promotional video of your product and their affiliate link.

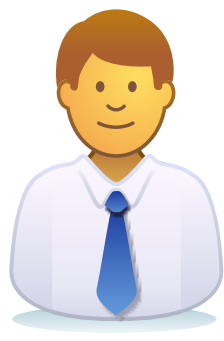

Each one of your affiliates could then fill in the form (as hosted by Turbo HTML Brander on your hosting account) and each one of the affiliates could then download a branded BONUS PAGE!
